

CS 33

Network Programming (2)

Streams in the Inet Domain (1)

- **Server steps**
 - 1) **create socket**

```
sfd = socket(AF_INET, SOCK_STREAM, 0);
```

Streams in the Inet Domain (2)

- **Server steps**
 - 2) **bind name to socket**

```
bind(sfd,  
    (struct sockaddr *) &my_addr, sizeof(my_addr));
```

Streams in the Inet Domain (3)

- **Server steps**

- 3) put socket in “listening mode”

```
int listen(int sfd, int MaxQueueLength);
```

Streams in the Inet Domain (4)

- **Client steps**
 - 1) **create socket**

```
cfd = socket(AF_INET, SOCK_STREAM, 0);
```

Streams in the Inet Domain (5)

- **Client steps**
 - 2) bind name to socket

```
bind(cfd,  
    (struct sockaddr *) &my_addr, sizeof(my_addr));
```

cfd

128.137.23.6:43

Streams in the Inet Domain (6)

- Client steps
 - 3) connect to server

```
connect(cfd, (struct sockaddr *)&server_addr,  
        sizeof(server_addr));
```

Streams in the Inet Domain (7)

- **Server steps**
 - 4) **accept connection**

```
fd = accept((int)sfd, (struct sockaddr *)addr,  
            (int *)&addrlen);
```

TCP Server (1)

```
int main(int argc, char *argv[ ]) {  
    if (argc != 2) {  
        fprintf(stderr, "Usage: port\n");  
        exit(1);  
    }  
  
    int lsocket;  
    struct addrinfo tcp_hints;  
    struct addrinfo *result;
```

TCP Server (2)

```
memset(&tcp_hints, 0, sizeof(tcp_hints));  
tcp_hints.ai_family = AF_INET;  
tcp_hints.ai_socktype = SOCK_STREAM;  
tcp_hints.ai_flags = AI_PASSIVE;  
  
int err;  
if ((err = getaddrinfo(NULL, argv[1], &tcp_hints,  
    &result)) != 0) {  
    fprintf(stderr, "%s\n", gai_strerror(err));  
    exit(1);  
}
```

TCP Server (3)

```
struct addrinfo *r;
for (r = result; r != NULL; r = r->ai_next) {
    if ((lsocket =
        socket(r->ai_family, r->ai_socktype,
            r->ai_protocol)) < 0) {
        continue;
    }
    if (bind(lsocket, r->ai_addr, r->ai_addrlen) >= 0) {
        break;
    }
    close(lsocket);
}
```

TCP Server (4)

```
if (r == NULL) {  
    fprintf(stderr, "Could not find local interface %s\n");  
    exit(1);  
}  
freeaddrinfo(result);  
  
if (listen(lsocket, 50) < 0) {  
    perror("listen");  
    exit(1);  
}
```

TCP Server (5)

```
while (1) {  
    int csock;  
    struct sockaddr client_addr;  
    int client_len = sizeof(client_addr);  
  
    csock = accept(lsocket, &client_addr, &client_len);  
    if (csock == -1) {  
        perror("accept");  
        exit(1);  
    }  
}
```

TCP Server (6)

```
char host_name[256];
char serv_name[256];
int err;
if ((err = getnameinfo(&client_addr,
    client_len, host_name, sizeof(host_name),
    serv_name, sizeof(serv_name), 0))) {
    fprintf(stderr, "%s/n", gai_strerror(err));
    exit(1);
}
printf("received connection from %s port %s\n",
    host_name, serv_name);
```

TCP Server (7)

```
    switch (fork()) {
    case -1:
        perror("fork");
        exit(1);
    case 0:
        serve(csock);
        exit(0);
    default:
        close(csock);
        break;
    }
}
return 0;
}
```

TCP Server (8)

```
void serve(int fd) {
    char buf[1024];
    int count;

    while ((count = read(fd, buf, 1024)) > 0) {
        write(1, buf, count);
    }
    if (count == -1) {
        perror("read");
        exit(1);
    }
    printf("connection terminated\n");
}
```

TCP Client (1)

```
int main(int argc, char *argv[]) {
    int s;
    int sock;
    struct addrinfo hints;
    struct addrinfo *result;
    struct addrinfo *rp;
    char buf[1024];

    if (argc != 3) {
        fprintf(stderr, "Usage: tcpClient host port\n");
        exit(1);
    }
```

TCP Client (2)

```
memset(&hints, 0, sizeof(hints));  
hints.ai_family = AF_INET;  
hints.ai_socktype = SOCK_STREAM;  
  
if ((s=getaddrinfo(argv[1], argv[2], &hints, &result))  
    != 0) {  
    fprintf(stderr, "getaddrinfo: %s\n", gai_strerror(s));  
    exit(1);  
}
```

TCP Client (3)

```
for (rp = result; rp != NULL; rp = rp->ai_next) {  
    if ((sock = socket(rp->ai_family, rp->ai_socktype,  
        rp->ai_protocol)) < 0) {  
        continue;  
    }  
    if (connect(sock, rp->ai_addr, rp->ai_addrlen) >= 0) {  
        break;  
    }  
    close(sock);  
}
```

TCP Client (4)

```
if (rp == NULL) {  
    fprintf(stderr, "Could not connect to %s\n", argv[1]);  
    exit(1);  
}  
freeaddrinfo(result);
```

TCP Client (5)

```
while (fgets(buf, 1024, stdin) != 0) {  
    if (write(sock, buf, strlen(buf)) < 0) {  
        perror("write");  
        exit(1);  
    }  
}  
return 0;  
}
```

Quiz 2

The previous slide contains

```
write(sock, buf, strlen(buf))
```

If data is lost and must be retransmitted

- a) write returns an error so the caller can retransmit the data.**
- b) nothing happens as far as the application code is concerned, the data is retransmitted automatically.**

Quiz 3

A previous slide contains

```
write(sock, buf, strlen(buf))
```

We lose the connection to the other party (perhaps a network cable is cut).

- a) write returns an error so the caller can reconnect, if desired.**
- b) nothing happens as far as the application code is concerned, the connection is reestablished automatically.**

CS 33

Event-Based Programming

Event Handling

Stream Relay

Solution?

```
while (...) {  
    size = read(left, buf, sizeof(buf));  
    write(right, buf, size);  
    size = read(right, buf, sizeof(buf));  
    write(left, buf, size);  
}
```

Select System Call

```
int select(  
    int nfd,           // size of fd_sets  
    fd_set *readfds,   // descriptors of interest  
                        // for reading  
    fd_set *writefds,  // descriptors of interest  
                        // for writing  
    fd_set *excpfds,   // descriptors of interest  
                        // for exceptional events  
    struct timeval *timeout  
                        // max time to wait  
);
```

Relay Sketch

```
void relay(int left, int right) {
    fd_set rd, wr;
    int maxFD = max(left, right) + 1;
    FD_ZERO(&rd); FD_SET(left, &rd); FD_SET(right, &rd);
    FD_ZERO(&wr); FD_SET(left, &wr); FD_SET(right, &wr);
    while (1) {
        select(maxFD, &rd, &wr, 0, 0);
        if (FD_ISSET(left, &rd))
            read(left, bufLR, sizeof(message_t));
        if (FD_ISSET(right, &rd))
            read(right, bufRL, sizeof(message_t));
        if (FD_ISSET(right, &wr))
            write(right, bufLR, sizeof(message_t));
        if (FD_ISSET(left, &wr))
            write(left, bufRL, sizeof(message_t));
    }
}
```

Relay (1)

```
void relay(int left, int right) {  
    fd_set rd, wr;  
    int left_read = 1, right_write = 0;  
    int right_read = 1, left_write = 0;  
    message_t bufLR;  
    message_t bufRL;  
    int maxFD = max(left, right) + 1;
```

Relay (2)

```
while (1) {  
    FD_ZERO(&rd);  
    FD_ZERO(&wr);  
    if (left_read)  
        FD_SET(left, &rd);  
    if (right_read)  
        FD_SET(right, &rd);  
    if (left_write)  
        FD_SET(left, &wr);  
    if (right_write)  
        FD_SET(right, &wr);  
  
    select(maxFD, &rd, &wr, 0, 0);
```

Relay (3)

```
if (FD_ISSET(left, &rd)) {  
    read(left, bufLR, sizeof(message_t));  
    left_read = 0;  
    right_write = 1;  
}  
if (FD_ISSET(right, &rd)) {  
    read(right, bufRL, sizeof(message_t));  
    right_read = 0;  
    left_write = 1;  
}
```

Relay (4)

```
    if (FD_ISSET(right, &wr)) {
        write(right, bufLR, sizeof(message_t));
        left_read = 1;
        right_write = 0;
    }
    if (FD_ISSET(left, &wr)) {
        write(left, bufRL, sizeof(message_t));
        right_read = 1;
        left_write = 0;
    }
}
return 0;
}
```

CS 33

Linking and Libraries

Libraries

- **Collections of useful stuff**
- **Allow you to:**
 - incorporate items into your program
 - substitute new stuff for existing items
- **Often ugly ...**

Creating a Library

```
$ gcc -c sub1.c sub2.c sub3.c
$ ls
sub1.c          sub2.c          sub3.c
sub1.o          sub2.o          sub3.o
$ ar cr libpriv1.a sub1.o sub2.o sub3.o
$ ar t libpriv1.a
sub1.o
sub2.o
sub3.o
$
```

Using a Library

```
$ cat prog.c
int main() {
    sub1();
    sub2();
    sub3();
}

$ cat sub1.c

void sub1() {
    puts("sub1");
}
```

```
$ gcc -o prog prog.c -L. -lpriv1
$ ./prog
sub1
sub2
sub3
```

Where does *puts* come from?

```
$ gcc -o prog prog.c -L. \
-lpriv1 \
-L/lib/x86_64-linux-gnu -lc
```

Static-Linking: What's in the Executable

- **ld puts in the executable:**
 - » (assuming all .c files have been compiled into .o files)
 - all .o files from argument list (including those newly compiled)
 - .o files from archives as needed to satisfy unresolved references
 - » some may have their own unresolved references that may need to be resolved from additional .o files from archives
 - » each archive processed just once (as ordered in argument list)
 - order matters!

Example

```
$ cat prog2.c
int main() {
    void func1();
    func1();
    return 0;
}

$ cat func1.c
void func1() {
    void func2();
    func2();
}

$ cat func2.c
void func2() {
}
```

Order Matters ...

```
$ ar t libf1.a  
func1.o  
$ ar t libf2.a  
func2.o  
$ gcc -o prog2 prog2.c -L. -lf1 -lf2  
$  
$ gcc -o prog2 prog2.c -L. -lf2 -lf1  
./libf1.a(sub1.o): In function `func1':  
func1.c:(.text+0xa): undefined reference to `func2'  
collect2: error: ld returned 1 exit status
```

Substitution

```
$ cat myputs.c
int puts(char *s) {
    write(1, "My puts: ", 9);
    write(1, s, strlen(s));
    write(1, "\n", 1);
    return 1;
}
$ gcc -c myputs.c
$ ar cr libmyputs.a myputs.o
$ gcc -o prog prog.c -L. -lpriv1 -lmyputs
$ ./prog
My puts: sub1
My puts: sub2
My puts: sub3
```

An Urgent Problem

- **printf is found to have a bug**
 - perhaps a security problem
- **All existing instances must be replaced**
 - there are zillions of instances ...
- **Do we have to re-link all programs that use printf?**

Dynamic Linking

- **Executable is not fully linked**
 - contains list of needed libraries
- **Linkages set up when executable is run**

Benefits

- **Without dynamic linking**
 - every executable contains copy of printf (and other stuff)
 - » waste of disk space
 - » waste of primary memory
- **With dynamic linking**
 - just one copy of printf
 - » shared by all

Shared Objects: Unix's Dynamic Linking

1 Compile program

2 Track down references with *ld*

- *archives* (containing *relocatable objects*) in “.a” files are statically linked
- *shared objects* in “.so” files are dynamically linked
 - » names of needed .so files included with executable

3 Run program

- *ld-linux.so* is invoked first to complete the linking and relocation steps, if necessary
